

## Rangers get technical with Greengauge

When one of the biggest football teams in Scotland wanted to install a new synthetic technical area they chose Greengauge. Rebecca Dempster who heads the synthetic surfaces division said " The Head Groundsman at Ibrox wanted an all weather surface that would blend in with the rest of the pitch. Greengauge was able to offer their Home Turf artificial grass which was the perfect solution. We are currently speaking to other senior football teams in this country and see this as a new opportunity for us".

## John Price joins Greengauge

Greengauge has appointed John Price the well known bowls personality as their new Sales Consultant.

John will be responsible for supporting the Greengauge sales effort in both their UK markets and rapidly expanding global markets.

If you would like John to come along for a chat at your club contact him through our HQ.

### Synthetic gardens take off

Are you fed up with spending your weekends cutting the grass? Do you want a great looking garden but without the effort?

Choose Home Turf artificial grass from Greengauge. For a free site visit without any obligation contact Rebecca Dempster at our HQ. Then sit back and enjoy the view!!

## Rising to the Challenge

Greengauge installed their first Tiger Turf Challenger all weather artificial football/hockey pitch at Culbokie near Inverness during the summer.

The new pitch transformed the overgrown and unused area at the community centre into a thriving sports community.

The surface caters for all ages and standards of players. The Challenger grass is a long pile polyethylene grass designed for FIFA 1 and FIH hockey.

## New appointments for Installation Team

Greengauge has promoted 2 key members of staff. Allan Docherty who has been involved in the business for many years becomes the new Installations Director. His main brief will be to manage key UK installations, all base construction work indoors and out and to look after all export work.

Mick Benstead also with many years experience behind him is promoted to Installations Manager. Mick will primarily look after indoor bowling clubs in this country.

Colin Cooper MD of the division commented "It is important for Greengauge to not only consolidate itself in core markets and maintain its position as the key provider in the UK bowling surface market but we must continue to seek out new markets like we have seen in the Far East this year. We now have a young and ambitious team that want to move this business forward and these appointments will help us achieve these goals".

## Outdoor clubs turn to Greengauge

In the UK Greengauge has noticed an upturn in enquiries from outdoor clubs who are experiencing difficulties with the cost of maintenance on grass greens, a dwindling level in greenkeeping expertise and even problems caused by water shortages in some parts of the country.

If you have ever considered an artificial green then Greengauge can offer the complete turn-key solution. From start to finish Greengauge will project manage all stages of the contract including all the civil engineering work and of course finally the famous Greengauge surface itself – still by far the most widely bowled on surface in the world.

Greengauge outdoors is cost effective – no more greenkeeper fees, chemicals or expensive dressings. Maintenance is minimal just basic good house-keeping like vacuuming the surface weekly, keeping on top of any moss/algae problems and letting the Greengauge team back once a year to give the green a check over.

Recent UK installations have included greens being laid in Redbourn near St Albans, Portsmouth and Edinburgh. Greengauge has even laid a new full size artificial crown green for Sheffield City Council and the reviews have been fantastic to date.

### The New Greengauge Surfaces Team for 2007
